30th June 2026

Training Programme Outline

This training programme is on the fundamentals of digital system design, building and verifying the core components of a CPU (processor). The training covered:

- Understand the fundamentals of digital design.
- Learn Verilog programming with SystemVerilog.
- Design and implement complex digital systems using online tools.
- Gain practical skills in digital design with FPGAs.
- Understand how to optimize digital circuits.

Dates: 21st March 2026 to 2nd May 2026

Venue: Online

Assignments: Completion of 4 out of 4 of the below assignments:

- A combinational logic circuits with a test bench.
- Traffic light controller at a simple intersection.
- Improved traffic light controller with a pedestrian crossing.
- Improved traffic light controller with a timing module.
